Prof. Dr. Dr. h. c. Wolfgang Rascher

I feel honoured to announce this international state of the art symposium on recent developments in paediatric basic and clinical pharmacology which is dedicated to my retirement as Head and Chairman of the Department of Paediatrics and Adolescent Medicine here in Erlangen, Germany. More than 40 years ago, when I started my basic research training at the Department of Pharmacology at the University of Heidelberg as a young physician, there was the mistaken view that children should be “protected” from the risk of research. When I moved to the Department of Paediatrics in Heidelberg in 1982, gaining new knowledge through paediatric and developmental pharmacology started to become a moral imperative to prevent harm from uncontrolled drug experiments in this vulnerable population.

Today, children progressively benefit from the basic and clinical research in this field and from new regulations and guidelines.

During this symposium, organised by Antje Neubert and Matthias Schwab, we will review our current knowledge and discuss future research ideas to further advance pharmacotherapy in children.

It is a pleasure to have the leading European experts in paediatric pharmacology here in Erlangen and I wish us an inspiring and stimulating meeting.
